

DAY Prehistoric Cultures Week 13
(Week 13 starts on Thursday)

Hunting / Gathering / Foraging

This week we go a-hunting—hunting for the “truth” about how Prehistoric Peoples lived off of the land. And in doing so we’ll have another look at !Kung San ethnographic analogy.

Hunting was a part of prehistoric peoples’ living off of the land, but not quite as big a part as is usually thought. Except with cold-climate cultures—like the Inuit, the “Eskimo”—women provided 60-80% of the food for the group, as they do today with “Hunting-Gathering” groups, even in groups that consider themselves primarily “hunters.”

But hunting was a crucial activity, a vital activity for some cold-climate folks like the Neandertal.

We’ll continue our close look at **lithics**, stone tools and stone tool making, so vital to the hunt itself. . . .

And we’ll have a look at the main features of “**band**” societies. We’ll see *The Hunters*—often said to be one of the top three anthropological films ever made—it is certainly one of the top three films viewed and used in other films. It most often takes a long time to hunt . . . it took *The Hunters* thirteen days basically to get one animal in the end. So it will take us two days, or most of two days, to watch *The Hunters* hunting action.

!Kung San Hunters

"In this classic documentary [*The Hunters*], the Kalahari Bushmen [aka Khoisan, !Kung, San] of Africa wage a constant war for survival against the hot arid climate and unyielding soil. *The Hunters* focuses on four men who undertake a hunt to obtain meat for their village. The chronicle of their 13-day trek becomes part of the village's folklore, illustrating the ancient roots and continual renewal of African tribal [*sic.*] cultures."

After the hunt on Tuesday we'll have a short look at another fundamental concept in anthropology and prehistoric cultures—**adaptation**. (We had a look at the sister concept Week 3, *Patterns of Variation*.)

(Peter Biella, Napoleon A. Chagnon and Gary Seaman)

"How do humans adapt to environmental challenges? In this [video], experts explore this question from many angles. The difference between acclimatization and adaptation is explained. Nina Jablonski explains skin-color function and adaptations related to UV radiation levels, the vitamin D hypothesis, and preventing the loss of folate in the body. High-altitude adaptations are also discussed, along with responses to heat and cold stressors. In the last segment, the evolutionary dance between humans and their pathogens is brought to light. The interwoven interactions between human cultural activities, and the evolution of new pathogens, are discussed, as well as the evolution of drug resistance in existing pathogens." – [Coast Learning Systems](#)

In the **moodle** Forum this week we hunt for the First Americans, the oldest American "artifact,;" and weigh in on atlatl hunting in the City of Duluth . . .

- [Forum: Who Were the First Americans? \(Due by Friday, 9 December 2011\)](#)
- [Forum: Oldest American Artefact \(Due by Friday, 9 December 2011\)](#)
- [Forum: Atlatl Hunting in Duluth? \(Due by Friday, 9 December 2011\)](#)

As usual, if you have any questions, please let me know: <mailto:troufs@d.umn.edu>. Or, better yet, post them on you **moodle** Discussion and Project forum boards.

Share your ideas. Discuss them on-line with the others in class . . .

CHAPTER 4
Modern Human Variation and Adaptation

Introduction	72
Historical Views of Human Variation	72
The Concept of Race	74
Racism	76
Intelligence	77
Contemporary Interpretations of Human Variation	77
Human Polymorphisms	78
Polymorphisms at the DNA Level	79
AT A GLANCE: Former and Contemporary Approaches to the Study of Human Variation	80
Human Biocultural Evolution	81
Population Genetics	83
The Adaptive Significance of Human Variation	83
Solar Radiation, Vitamin D, and Skin Color	84
The Thermal Environment	87
High Altitude	90
Infectious Disease	92
The Continuing Impact of Infectious Disease	94
AT A GLANCE: Zoonoses and Human Infectious Disease	96
Summary	97
Critical Thinking Questions	98

CHAPTER 5
Macroevolution: Processes of Vertebrate and Mammalian Evolution

Primates

CHAPTER 6
An Overview of the Primates

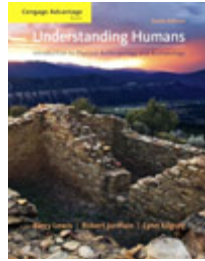

Introduction	118
Primate Characteristics	118
Primate Adaptations	122
Evolutionary Factors	122
Geographical Distribution and Habitats	123
Diet and Teeth	123
Locomotion	126

For Week 13 Activities see [moodle](#)

readings from [Understanding Humans, 10th Edition](#)

Ch. 14, "Food Production," pp. 345-386

The materials from Ch. 14 will be reviewed in the Week 14 presentations
