Statistics in Medical Research

by
Sara Fett, Clinical Statistics
Leigh-Gomez-Dahl, Cancer Center Statistics
Mayo Clinic
Department of Health Sciences Research

Abstract: We will share an overview of Mayo Clinic and Department of Health Sciences Research (HSR). Our department’s vision is to enhance the understanding of health and human disease through collaborative research teams. To help articulate what this looks like we will provide an overview of the divisions within HSR and the variety of projects we work on along with the differing positions (or job titles) we use to support these projects. We both manage analytical jobs within the Division of Biomedical Statistics and Informatics and as such we will delve more deeply into the roles and responsibilities held by our PhD, MS and BS level statistical and programming support. We will share more about our recruitment efforts and what skills work best for our team-based approach to medical research.
