Origami and Colorability

by

Bethany Kubik

United States Military Academy, West Point, NY

Abstract:

We study two different coloring problems through origami. First, we produce a flat foldable crane and explore coloring of the crease pattern, that is, the pattern made by the creases on the paper. Next, we explore colorability through three-dimensional objects created with multiple sheets of folded paper.

*Please bring a writing utensil. Origami folding paper will be provided!
