

**William F. Cannon** – Geologist, U.S. Geological Survey, Reston, VA (PhD, Syracuse)

*Research Interests:* Bill has studied the regional geology and tectonics of the southern Lake Superior region for the past 43 years, including the major iron ranges of Michigan and Wisconsin. A synthesis of the geology and iron resources of the Gogebic Iron Range was recently published as a USGS Professional Paper. His studies have provided a context for the age, depositional setting, and subsequent deformation and metamorphism of the iron formations. Recently, he has mapped and studied the Sudbury impact layer in the iron ranges of Michigan and Wisconsin and used that layer to clarify stratigraphic relationships between the geographically separated ranges.
