

Mark Jirsa – Senior Geologist, Minnesota Geological Survey, St. Paul, MN (MS, Minnesota Duluth)

Research Interests: Geologic mapping, utilizing the combination of geophysical, drill core, and outcrop information to improve and convey the understanding of Minnesota's Precambrian terranes. Recent projects include creation of a bedrock geologic map and structural study of the Mesabi Iron Range, State-wide bedrock geologic map, maps of wilderness areas affected by forest fires, and research related to 1850 Ma Sudbury meteorite impact layer and Archean unconformities. He is also review coordinator and content editor for MGS map products.
