The Duluth REU half-time competitions are a series of 20 (approximately) minute contests on mathematical themes that take place midway through the one of the two weekly sessions in which the participants present the results they have obtained the previous week. Not all competitions involve problem solving. It may be to identify the person who first proved a well known theorem, when was a well know theorem first proved (the closer one is to the actual year the more points awarded, the first name of a famous mathematician, or the native country of famous mathematician.
